

## Year 3 Science Home Learning - Animals including humans (food, diet, skeletons and muscles)

In order to support and develop our learning in class, you should choose one of the activities below linked to our work about Animals including humans. You can use the activities or adapt them to your own! You may wish to complete more than one of these activities. We look forward to seeing all of your homework! Once completed please bring your homework in so we can share it with the rest of the class 😊

Make a collage or draw your own 'eat well plate'. How could you make sure it is nutritional and balanced?	Help an adult cook a healthy meal at home and bring in a photo. Can you explain what different food groups are in your meal? Can you explain why it is healthy?
Research your favourite animal to find out about their skeletons (if they have one!). Can you explain what jobs some of the bones do?	Can you find out 10 amazing facts about the bones in a Human skeleton? Create a factual poster to show what you have learnt.
